

ABDULRAHMAN

Python Developer | Backend Engineer | Automation Specialist

abrahman142006@gmail.com | 0328-7012883 | Lahore, Pakistan | [linkedin.com/in/abdulrahman-iqbal01](https://www.linkedin.com/in/abdulrahman-iqbal01) | github.com/abraaham1

PROFILE

Computer Science student and Python developer with hands-on experience building automation pipelines, backend systems, and database-centric solutions. Proven track record delivering ERP integrations and workflow automation in software house environments. Passionate about writing clean, production-ready code that solves real business problems.

EDUCATION

Bachelor of Computer Science Present
Punjab University College of Information Technology (PUCIT) | CGPA: 3.69

Intermediate
Punjab Group of Colleges

Matriculation
Unique Group of High School

SKILLS

Languages	Web & Backend	Automation & Robotics
- Python - C++ - HTML / CSS / JavaScript	- Flask - FastAPI - Django - MERN Stack	- n8n - Automation Pipelines - ERP Integrations - Robotics

EXPERIENCE

- Intern** EUSOL Software House (6 Weeks)
- Developed Python-based automation scripts for ERP reporting and ML-assisted data processing, reducing manual effort and improving accuracy across departments.
- Freelance Projects**
- Delivered ERP automation services within a software house environment, streamlining internal workflows and enabling reliable cross-platform data synchronization across enterprise modules.

PROJECTS

- PayTrack: Desktop Installment Tracker**
- Built a desktop application for a client to manage and track customer installment plans, providing a clear dashboard of payment schedules, outstanding balances, and overdue alerts.
- Gesture-Controlled Robotic Hand**
- Designed and built a real-time robotic hand that mirrors human finger gestures using computer vision, translating hand landmark data into precise servo motor commands.
 - Achieved low-latency response through an optimized vision pipeline, making it viable for assistive technology and human-machine interface demonstrations.
- ERP Automations**
- Engineered end-to-end automation workflows within ERP environments, synchronizing data across modules and eliminating repetitive manual data entry.
 - Reduced processing time for key business operations by automating report generation, approval flows, and cross-system data transfers.
- Django-Based Form Automation**
- Built a Django web application that automates form submission workflows, handling validation, routing, sending confirmation email, and record storage without manual intervention.
- Job Search Automation using n8n**
- Created an n8n-powered pipeline that scrapes job listings from multiple platforms, filters by role and location, and delivers curated results via email or messaging.
 - Reduced daily job search effort from hours to minutes by orchestrating multi-source data collection, deduplication, and personalized delivery workflows.
